

Federal Identity Proofing — NIST SP 800-63A-4 IAL2 & IAL3

Trust Swiftly delivers attended, high-assurance identity proofing for agencies, systems integrators, and contractors — on controlled hardware, inside your security boundary, with evidence packages built for ISSO review and 3PAO assessment.

NIST SP 800-63A-4 | FEDRAMP HIGH (CLASS D) ALIGNED | SOC 2 TYPE II | ISO 27001 | EO 14028 & OMB M-22-09

CORE COMPETENCIES

- **Attended IAL3 identity proofing** per NIST SP 800-63A-4 — trained agents attend live sessions while applicants use provider-controlled, inspected hardware at their office or home.
- **Instant IAL2 verification** on the same workflow engine — run IAL2 pre-enrollment in parallel while IAL3 kits are in transit so urgent starts stay on schedule.
- **Document, NFC chip & biometric evidence capture** with continuous anti-spoofing and AI-deepfake defense; KBV-free by design, as rev 4 requires.
- **Defensible evidence packages** — session artifacts, chain-of-custody records, and NIST 800-63A-4 control mappings packaged for ISSO review and 3PAO assessment.
- **Step-up re-verification** for account recovery, privilege elevation, and other high-risk events after initial onboarding.
- **Boundary-respecting deployment** — inside FedRAMP-authorized GovCloud environments (e.g., GCP Assured Workloads, AWS GovCloud) or on agency-owned systems.

DIFFERENTIATORS

- **Coverage without enrollment centers:** controlled proofing kits deploy to all 50 states and 32+ countries — offices and employee homes, no applicant travel.
- **IAL2 + IAL3 on one platform**, including instant IAL2 — one vendor, one evidence model, every assurance level.
- **\$100K public spoofing challenge** against our proofing stack — zero successful bypasses to date.
- **Auditable hardware custody:** every kit is cryptographically verified, physically inspected, and chain-of-custody logged after each verification session.
- **Hardware-agnostic and transparent:** vetted COTS or government-furnished equipment (GFE), with SBOM visibility — no black-box kiosks or opaque supply chains.
- **Data sovereignty:** PII stays in your controlled boundary and is purgeable on demand — no multi-tenant commingling of biometric evidence.

SELECTED PERFORMANCE

95%

reduction in fraudulent applications (Ready Capital)

25%

faster hiring and onboarding cycle times

15 hrs

of manual review recovered per week per team

Published customer results from identity verification deployments; federal references and a live capability demonstration are available on request.

UEI / CAGE	Provided upon request

APPLICABLE NAICS

541519	Other Computer Related Services
541512	Computer Systems Design Services
518210	Computing Infrastructure & Data Processing

PROCUREMENT PATHS

- GSA Schedule
- NASA SEWP
- ITES-SW2
- Direct award & pilot programs

COMPLIANCE & SECURITY

- NIST SP 800-63A-4 aligned (IAL2 / IAL3)
- FedRAMP High (Class D) aligned deployments
- SOC 2 Type II · ISO 27001
- Supports EO 14028 & OMB M-22-09 Zero Trust
- Accessibility-ready remote workflows

DEPLOYMENT MODELS

- Managed remote kits (fastest start)
- Deployable kiosks (field ready)
- Government-owned & operated on GFE
